The present paper may represent a good departing point for the novice. It may also guide the expert finding his/her way in the rest of the volume (see Section 3). Background, motivations and acknowledgements. In the present case the role of such an environment is played by an appropriate projective subspace of  $P(\hat{\mathbb{S}}^n(V \hat{\rightarrow} V))$ . The trick to obtain the desired embedding consists in regarding an  $n$ -dimensional subspace  $L \hat{\in} LGr(V \hat{\rightarrow} V)$  as a line in  $\hat{\mathbb{S}}^n(V \hat{\rightarrow} V)$ . Indeed, a basis  $\{l_1, \dots, l_n\}$  of  $L$  defines, up to a projective factor, a unique (nonzero)  $n$ -vector  $l_1 \hat{\wedge} \dots \hat{\wedge} l_n$ .
